## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a device structure, classified in class 257, subclass 328.
- II. Claims 33-47, drawn to a method, classified in class 438, subclass 149.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the insulating film may be formed from CVD, oxidation or PVD techniques.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and vice versa, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

#### GROUP I:

Art Unit: 2813

Species 1: claims 1-7, pertaining to a semiconductor device including capacitor wiring on the first insulating film;

Species 2: claims 8-16, pertaining to a semiconductor device having both a first and second substrate;

Species 3: claims 17-24 pertaining to a semiconductor device having a first and second electrode on the first insulating film;

Species 4: claims 25-32, pertaining to a TFT device;

GROUP II:

Species 1, claims 33-35, pertaining to a method for manufacturing a semiconductor device having a capacitor wiring formed on the first insulating film;

Species 2: claims 36-38 pertaining to a method of forming a semiconductor device having a liquid crystal sandwiched between a pair of substrates;

Species 3: claims 39-42 pertaining to a method for forming a semiconductor device having a first and second electrode on the first insulating film;

Species 4: claims 43-45 pertaining to a method of forming a semiconductor device having a liquid crystal sandwiched between a pair of substrates with a capacitor wiring;

Species 5: claim 46-47 pertaining to a method of etching the first and second conductive layers to form a tapered portion.

Art Unit: 2813

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

---

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2813

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
